

We at Dentiq Implant Clinic are here to help you to maintain and improve your smile and for you to feel great at the same time with our facial aesthetic treatments.

Regular check-ups – why they are good for you?

It is vitally important to have regular check-ups to maintain good oral health and achieve a great smile as well as improving your overall health and wellbeing.

It's always better to stop problems before they start and regular dental check-ups with our dentists and hygienist can help reduce the need for treatments. Indicators of many diseases including diabetes, strokes or heart conditions can be spotted by our dentist in their early stages. This is why regular visits to the dentist are a crucial element of preventive care, alongside a good oral hygiene routine and a healthy diet. At your dental check-up we assess your oral health and look for any deterioration.

Each check-up includes:

- Checking for decay in your teeth
- Checking your gums for disease
- Checking for oral cancer
- Oral hygiene instruction
- Dental x-rays when necessary
- Smoking and alcohol advice if necessary
- Advise on how to improve your smile with facial aesthetics
- Treatment planning with options and costings

With time, some teeth may show signs of damage because they have been worn down by general wear, grinding and over-brushing. By following a tailored made programme of prevention, your teeth should give you less trouble and, with care and attention, you should be able to keep all your teeth, all your life.

“Your smile and teeth are for a lifetime”

How can I maintain and improve my smile?

Cosmetic dentistry

Cosmetic dentistry involves dental procedures that improve the overall aesthetics of your smile and is suited to any number of people hoping to improve the appearance of their teeth. Each treatment is customised to individual requirements.

Teeth whitening

Teeth Whitening is an effective way of lightening the natural colour of your teeth without removing any of the tooth surface. This gradual treatment involves first having whitening trays constructed that fit closely to your teeth. You are shown how to apply the whitening gel and use the trays at home.

Veneers

Veneers are wafer-thin laminates or shells of tooth-coloured material (which can be either porcelain, ceramic or composite bonding material). They are “cemented” to the front surface of teeth to improve their cosmetic appearance. Veneers have long been used to create the ‘ultimate smile makeover,’ as they can transform stained, damaged and crooked teeth into the perfect smile.

Why Dental Implants?

Dental implants can not only change the way you look but the way you feel and the way you enjoy life. They give you a completely natural smile, helping you to eat, talk and smile normally whilst maintaining your facial profile with no need to remove any healthy teeth. Implants made from titanium are placed into the jaw bone to replace tooth roots and then used to support “teeth”. They are placed to support crowns, bridges or dentures. You don’t need an implant per tooth. In fact, if you have a full lower denture, having two Implants placed for attachment of the denture makes an amazing difference.

Dental Implants are the next best thing to natural teeth...

- Look, feel and function the same as natural teeth
- Gives you a completely natural smile
- Helps you to eat, talk and smile normally
- Helps maintain your facial profile and gum vitality

With our stylish and relaxed surroundings, Dentiq Implant Clinic is the practice to visit on the South Coast.
